Subject: Sunnyside sampling

Hello all,

Just getting in from the second day of sampling with Formation Environmental and Terry Turner from Sunnyside. Formation had three fine employees present. Terry and Formation's team lead made the first sampling team that started at Arrastra and headed downstream. A team of two from Formation headed upstream from Silverton. The two met in the middle. All sampling was done from clean dippers so noone got in the water to toss up sediment. I grabbed 7 random splits, going back and forth from one team to the other. Kirstin came for some of the fun too. Splits were taken from the same cubitainer that Formation sampled from. Formation was extremely professional and I am excited to see their conclusions. This is the first of several trips down here for Formation.

Sunnyside asked for permission to sample A68 from the Town Board on Monday night. It was given with no discussion.

We had decent weather and very clear waters. Not much melting going on up here.
